

Solving Angle Measures with Parallel and Perpendicular Lines

Jonathan R. Bacolod

Complementary and Supplementary Angles

Complementary angles add up to 90° ; **supplementary angles** add up to 180° .

Vertical Angles

Vertical angles are opposite angles formed by two intersecting lines and are always equal.

Corresponding Angles

Corresponding angles are equal when lines are parallel.

Alternate Interior Angles

Alternate interior angles are equal when lines are parallel.

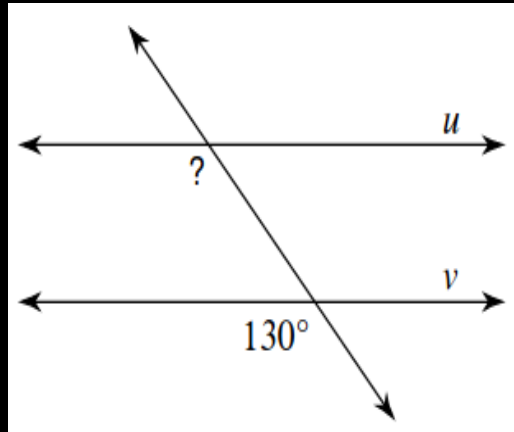

Same-Side Interior Angles

Same-side interior angles are supplementary when lines are parallel.

Examples

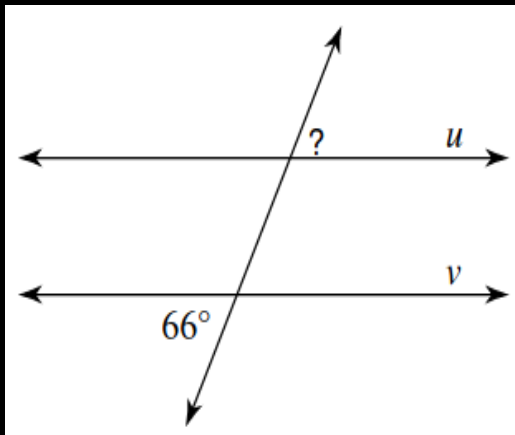

Example 1

Find the measure of the unknown angle or variable.

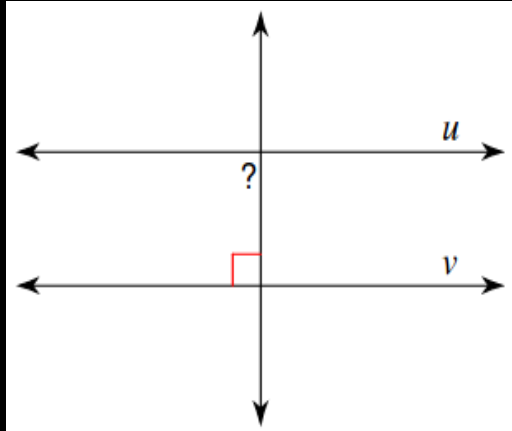

Example 2

Find the measure of the unknown angle or variable.

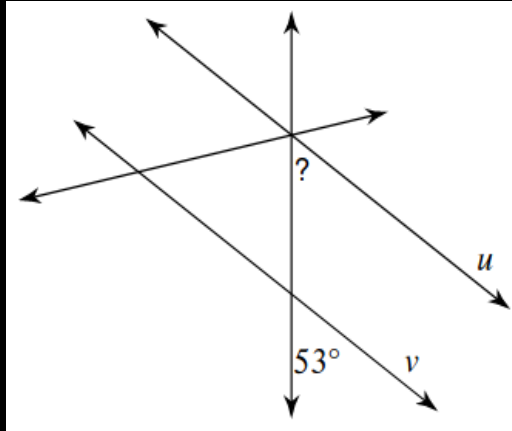

Example 3

Find the measure of the unknown angle or variable.

Example 4

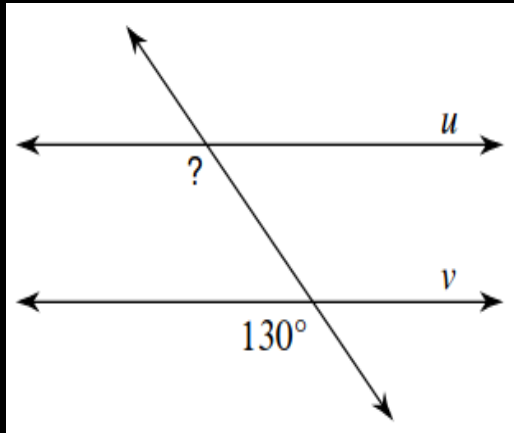

Find the measure of the unknown angle or variable.

Practice Exercises

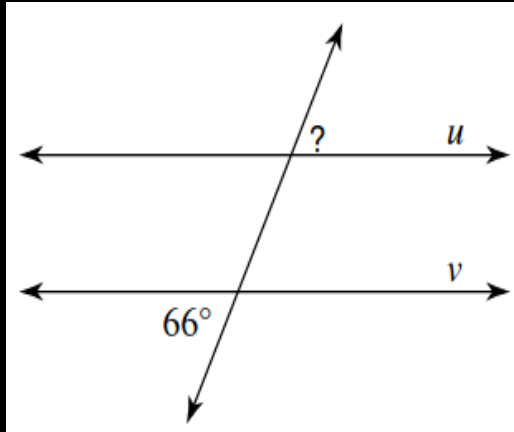

Practice 1

Find the measure of the unknown angle or variable.

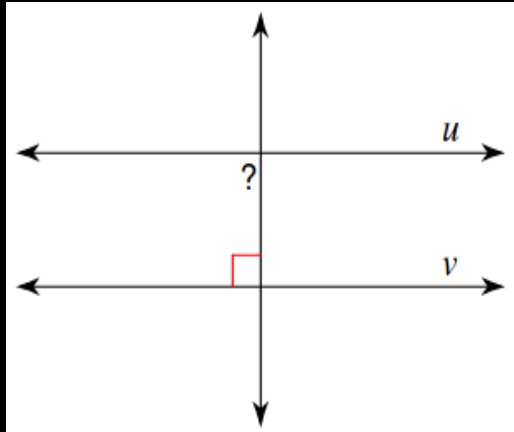

Practice 2

Find the measure of the unknown angle or variable.

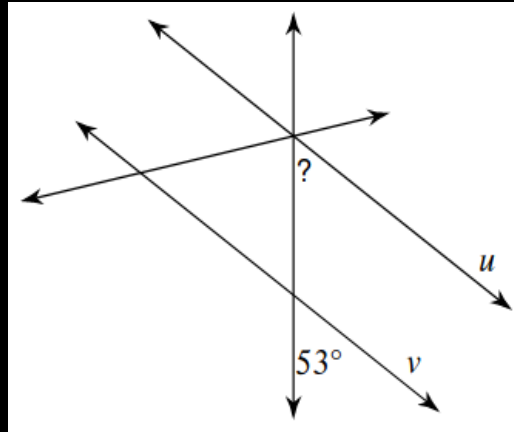

Practice 3

Find the measure of the unknown angle or variable.

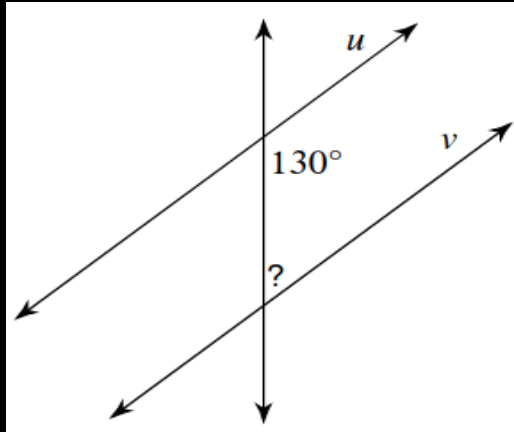

Practice 4

Find the measure of the unknown angle or variable.

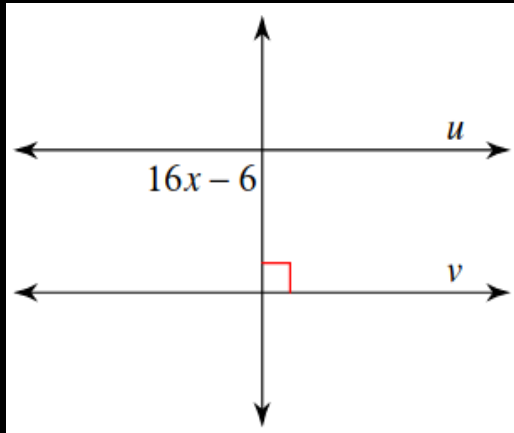

Practice 5

Find the measure of the unknown angle or variable.

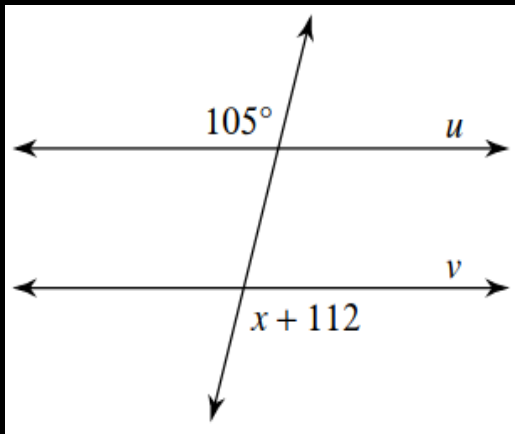

Practice 6

Find the measure of the unknown angle or variable.

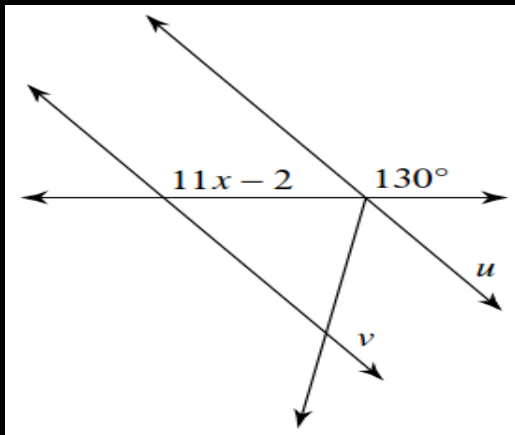

Practice 7

Find the measure of the unknown angle or variable.

Practice 8

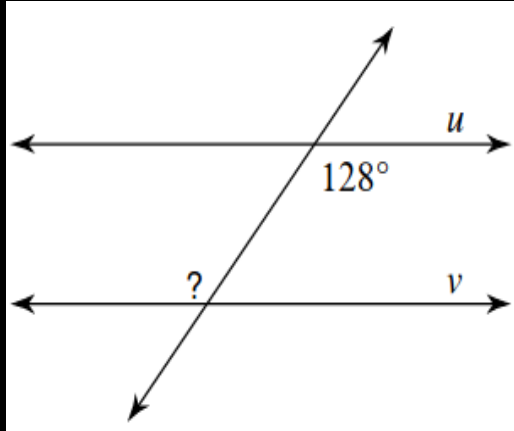

Find the measure of the unknown angle or variable.

Activities

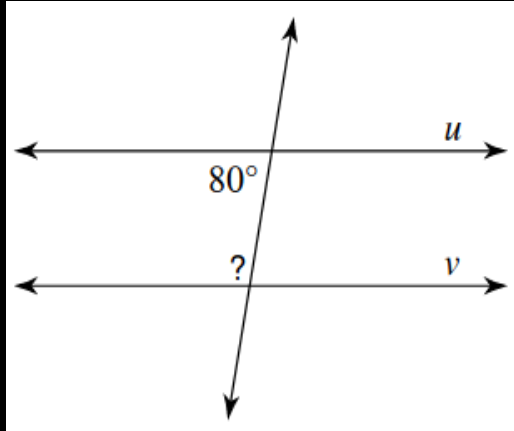

Activity 1

Find the measure of the unknown angle or variable.

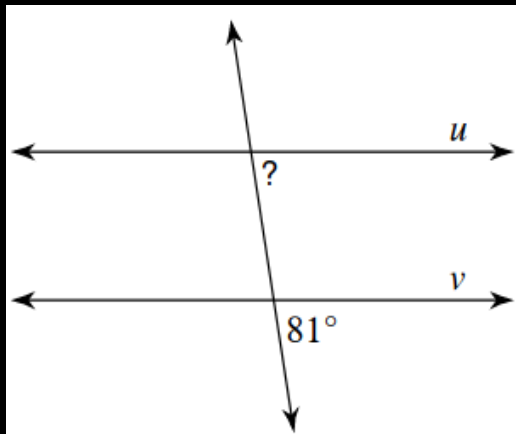

Activity 2

Find the measure of the unknown angle or variable.

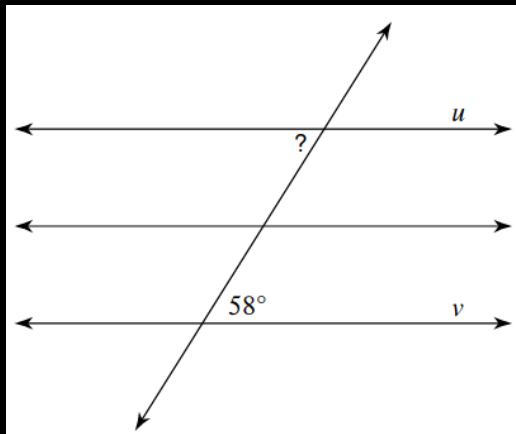

Activity 3

Find the measure of the unknown angle or variable.

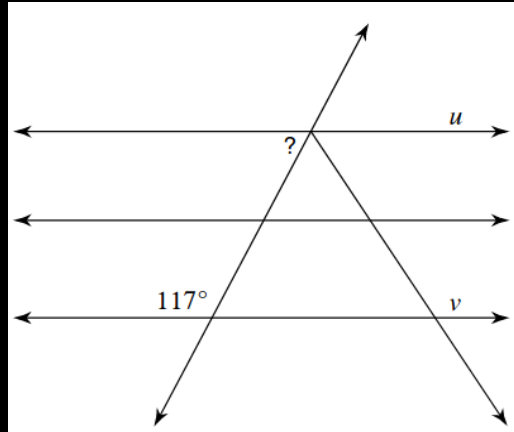

Activity 4

Find the measure of the unknown angle or variable.

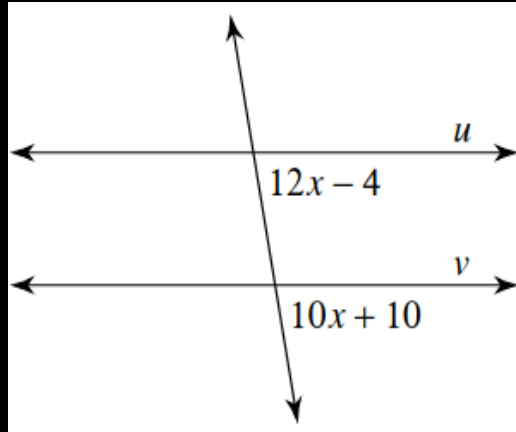

Activity 5

Find the measure of the unknown angle or variable.

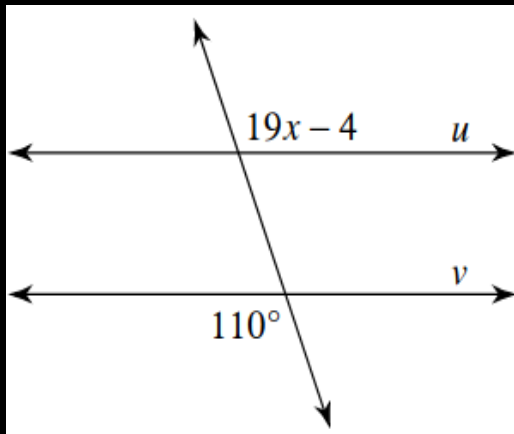

Activity 6

Find the measure of the unknown angle or variable.

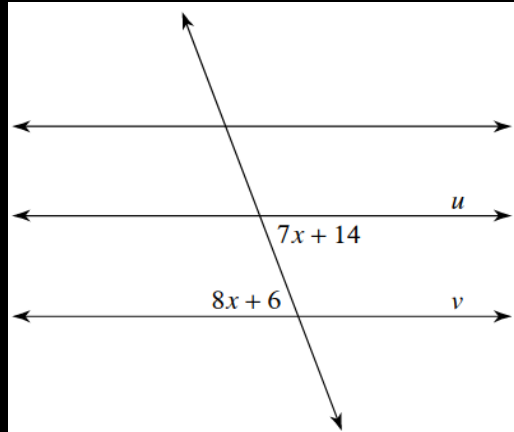

Activity 7

Find the measure of the unknown angle or variable.

Activity 8

Find the measure of the unknown angle or variable.

Thank you!
